

EDITORIAL

The term artificial intelligence is being widely used these days. It refers to the machines that can perform certain tasks like humans. It encompasses a broad spectrum of emerging technologies that continue to influence daily life. Artificial intelligence has many applications in dentistry. It is speculated that dentistry would be the fastest branch of medical science to adopt AI.

Encounters of patients at every treatment step generates several types of data. Moreover, thousands of research papers are getting published around the globe. Dental surgeons need to follow the latest technological trends and apply the latest treatment options.

Artificial Intelligence systems have the potential to be an extremely useful tool for dental surgeons.
